

Daniel's Story

On October 24, 2013 they found out that Daniel, a 4 year old had a Wilms tumor. This type of cancer effects the kidneys and the doctors found a softball size mass on one of them. They completely removed that Kidney. Because the Kidney cracked open it was diagnosed a stage 3 tumor. Because of the severity of the tumor he had to have radiation and Chemo therapy. Danny has dealt with this better then most of us would. He has now completed his radiation therapy and still has a total of 6 months of Chemo.
